Companies

There is a function `signFunc(x)` that returns:

- 1 if  $x$  is positive.
- -1 if  $x$  is negative.
- 0 if  $x$  is equal to 0.

You are given an integer array `nums`. Let `product` be the product of all values in the array `nums`.

Return `signFunc(product)`.

### Example 1:

**Input:** `nums = [-1,-2,-3,-4,3,2,1]`

**Output:** 1

**Explanation:** The product of all values in the array is 144, and `signFunc(144) = 1`

### Example 2:

**Input:** `nums = [1,5,0,2,-3]`

**Output:** 0

**Explanation:** The product of all values in the array is 0, and `signFunc(0) = 0`

### Example 3:

**Input:** `nums = [-1,1,-1,1,-1]`

**Output:** -1

**Explanation:** The product of all values in the array is -1, and `signFunc(-1) = -1`

### Constraints:

- $1 \leq \text{nums.length} \leq 1000$
- $-100 \leq \text{nums}[i] \leq 100$
