

Companies

Given the root node of a binary search tree and two integers low and high, return the sum of values of all nodes with a value in the **inclusive** range [low, high].

Example 1:

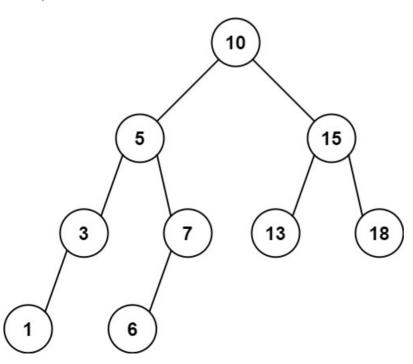

Input: root = [10,5,15,3,7,null,18], low = 7, high = 15

Output: 32

Explanation: Nodes 7, 10, and 15 are in the range [7, 15]. 7 + 10 + 15 =

32.

Example 2:

Input: root = [10,5,15,3,7,13,18,1,null,6], low = 6, high = 10

Output: 23

Explanation: Nodes 6, 7, and 10 are in the range [6, 10]. 6 + 7 + 10 = 23.

Constraints:

- The number of nodes in the tree is in the range $[1, 2 * 10^4]$.
- 1 <= Node.val <= 10⁵
- $1 \le low \le high \le 10^5$
- All Node.val are unique.
